

A.D.A.M. CORP

Administrative Defense of Automated Management Corporation

PUBLIC OVERVIEW | OCTOBER 3, 2026

Human judgment. Accountable technology.

A.D.A.M. Corp develops software that connects reliable information, professional judgment and accountable review. Our current work spans clinical workflows and site/event security planning, with each product governed by its own access and release boundaries.

CORE CAPABILITIES

Software research and development

Operational requirements, workflow modeling, prototypes, controlled evaluations and implementation documentation.

Clinical workflow technology

Structured documentation intake, review and correction workflows, role-specific workspaces and payment-readiness preparation.

Geospatial and protective planning

Terrain and lidar research, interactive planning prototypes, resource and route dependencies, and evidence requirements for site/event assessment.

Accountable implementation

Permission boundaries, human review, traceable evidence, source-controlled checks and clearly stated release readiness.

THE A.D.A.M. APPROACH

Connect observations to the purpose of the operation and explain the resulting decisions.

Separate product roles, data and authority while preserving evidence and review.

Show what is implemented, what has been tested and what still requires validation.

Company-developed software and controlled prototypes provide the foundation for scoped delivery and further validation.

SELECTED DEVELOPMENT WORK

MEDZ

CONTROLLED SYNTHETIC EVALUATION

Implemented clinical-documentation workflows, separate Clinical and Executive workspaces, correction/review flows and payment-readiness preparation. Production use, PHI and external exchanges remain subject to release acceptance.

Security Assessment

IN DEVELOPMENT; LOCAL PROTOTYPE

A separate A.D.A.M. product with local terrain/lidar previews and interactive demonstrations of route, post, EMS staging and cargo-width changes. CAD imports, provider integrations and operational analyses remain planned or unvalidated.
